E-COMMERCE WEBSITE IN PHP WITH SOURCE CODE

☐ October 13, 2018   ☐ Fabian Ros   ☐ 54 Comments

Project: E-commerce website in PHP with source code

– To download E-commerce website project for free (scroll down)

About Project

E-Commerce Website project is developed using PHP, CSS, Bootstrap, and JavaScript. Talking about the project, it has all the essential features required for an e-commerce website. This project contains the user and admin side. Admin can manage products, suppliers, view logs and many more. From user account, he/she can view products and purchase it easily. The Admin plays the main role in the management of the website. In this project, admin performs all the main functions like managing products, suppliers, users and much more.

About Website

After logging in as a user, he/she can view all the available products and gets access to add the product in their carts to purchase. Each and every product contains its own photo, descriptions with reasonable price. In order to purchase an item, the user has to enter product quantity and complete shipping address. There are different product categories too. This e-commerce website lists all products in user's feed with its respective price. Without logging in as a user, he/she won't get any access to purchase any items; only the user can check items and its details.

Admin Panel

The Admin has full control of the system, admin performs all the main functions like managing products, suppliers, users and much more. Here, the user can check user and admin log information as well as product and suppliers. The admin can manage all products. In order to add products, the user has to provide name, description, price, quantity, supplier, photos, and a serial key. Likewise, to add supplier he/she has to provide supplier name, address, contact details, and email id. In short, admin can perform CRUD function on the management of suppliers and products. And if a product's quantity decreases after maximum order then admin can increase it easily. The last feature of this project is about user management. Admin can add users to the management of the site.

E-Commerce Website in PHP helps in easy management of an e-commerce site. Design of this project is simple so that user won't find it difficult to understand and use. To run this project you must have installed virtual server i.e XAMPP on your PC (for Windows). E-Commerce Website in PHP with source code is free to download, Use for educational purposes only! For the project demo, have a look at the image slider below.
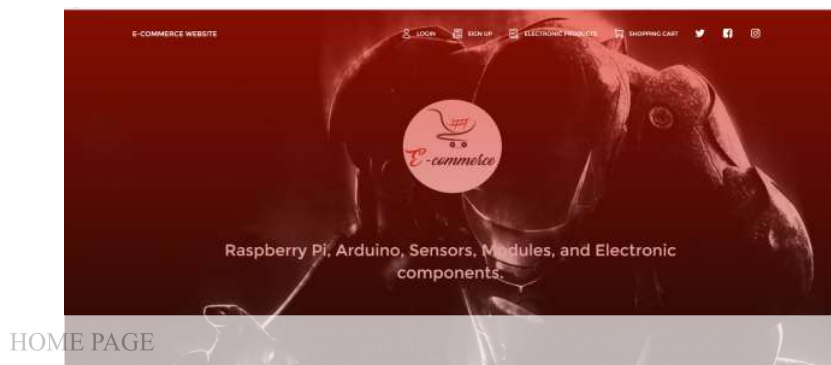

Features:

1. User login & sign up
2. Administrator Dashboard
3. Carts
4. User and admin logs information
5. CRUD products
6. CRUD suppliers
7. Add users

How To Run??

After Starting Apache and MySQL in XAMPP, follow the following steps

1st Step: Extract file
2nd Step: Copy the main project folder
3rd Step: Paste in xampp/htdocs/

Now Connecting Database

4th Step: Open a browser and go to URL "http://localhost/phpmyadmin/"
5th Step: Then, click on the databases tab
6th Step: Create a database naming "electricks" and then click on the import tab

7th Step: Click on browse file and select "electricks.sql" file which is inside "DATABASE" folder
8th Step: Click on go.

After Creating Database,

9th Step: Open a browser and go to URL "http://localhost/Electricks/Electricks-shop/index.php"
Insert the username and password which is provided inside the "Readme.txt" file.

For Admin Panel

Final Step: Go to URL "http://localhost/Electricks/Electricks-shop/pages/admin_panel.php"
Or simply log in as a user, you'll see "Admin Panel" option in the Navigation bar. It will redirect you to Admin Panel.

LOGIN DETAILS ARE PROVIDED IN "Readme.txt" FILE INSIDE THE PROJECT FOLDER

Diksha   ☐

hii,
I am getting the below error, can anyone help me, I did create
the database and then imported the sql file from DATABASE :

Guest

Error
SQL query:

—

— Database: `electricks`
—

_____

—
— Table structure for table `admin`
—

```
CREATE TABLE IF NOT EXISTS admin (
user_id int(11) NOT NULL,
firstname varchar(50) NOT NULL,
lastname varchar(50) NOT NULL,
email varchar(50) NOT NULL,
username varchar(50) NOT NULL,
password varchar(50) NOT NULL
) ENGINE=InnoDB AUTO_INCREMENT=4 DEFAULT
CHARSET=latin1
```

Hey Admin ! Might've found a small bug . Here , I've noticed every new user created gets admin rights as the admin dashboard redirects to the CRUD product page , where a mere user can change the vital product details. There are other queries besides this. It'd be really convenient if i got hold of your mail , so we could further this conversation there. Thank You so much!

Why the css file named as now-ui-kit.css?v=1.1.0 on linking with PHP file

But on folder it's just now-ui-kit.css

Hi,

How can I restrict the admin menu reflected in user login? I don't want to see the admin menu in normal user ie, customer login. pls guide me

☐ 0 ☐   ☐ Reply   ☐ 3 months ago

Jayson   ☐

Guest

can you make it another navbar bar or program taht CUSTOMER LOGIN CAN ONLY ALLOW TO BUY AND CANNOT go to admin panel WHILE ADMIN CAN LOG IN ONLY TO BE AN ADMIN AND CANNOT BUY A PRODUCT BUY ONLY CAN EDIT VIEW OR DELETE AND UPDATE? TAHNK YOU and please explain also

**About Source Code
& Projects**

Source Code & Projects is
developed to provide
beginners with tutorials,
source code, and projects
to build their technical
knowledge and exchange
ideas. We hope to provide
students with interesting
and relevant downloadable
open source projects for
free. Visit us to join our
Source Code Projects
organization.

TL;DR We are fast becoming best open source code & projects organization - Code Projects is developed to provide interested people with resources to build their knowledge, and exchange ideas. We hope to provide anyone with necessary and relevant content projects they need to practice and help in their daily programming career. We provide tutorials, free source codes and how to's? to get started with projects that might interest you. Please feel free to use it for educational purposes. The source code for the projects available is based on different computer programming languages such as C/C++, PHP, Java, Javascript, VB.Net, https://code-projects.org/c/languages/project/c-sharp-projects/C#, Python and Swift. We are also the go-to platform to find the source code for the application project. If you want to be a game developer or android developer, we can help you get started with our list of game app projects and Android app projects. So feel free to choose whichever language you want to begin your project. What more, we also provide beginners with C Tutorial, C++ Tutorial, Java Tutorial, PHP Tutorial, JavaScripts Tutorial, and Python Tutorial. Visit Source Code & Project today to see how we can help build your career!
